The 10 R6 facilities identified from the 2014 NATA all exceeded a risk increase of more than 100-in-1,000,000. We are working with 9 facilities.

The 10th facility is Sterigenics Santa Teresa, NM which installed controls in 2014. We were able to argue that the control is adequate and placed a pop-up balloon on the NATA map. We removed it from consideration for additional work.

Questions:

- what triggers are the triggering point to be part of the eto monitoring network
- sterognics: wasn't there a revision to the stand, status?
